PROJECT PROFILE – RBS MANCHESTER SUPER FLAGSHIP

This project involved the complete strip out and refit of a key super flagship banking branch. The branch was being refitted in a city centre shopping plaza on a busy main street, so reducing the environmental impact of works was highly important.

Full new power distribution and lighting installation, including client-specified luminaires, were installed throughout.

To meet the comfort conditions required for staff and customers ventilation was provided by a roof mounted heat recovery air handling unit feeding primary air to localised dual heating and cooling air conditioning units (AC).

Each AC unit is individually controlled to provide secondary air and ensure the differing spaces can be individually conditioned.

Many of the services we installed had to meet the specifications of both our client and the standards of the shopping plaza where the branch is located, and we are pleased to say we met both, resulting in a highly successful project.

CLIENT: ROYAL BANK OF SCOTLAND

VALUE: £450,000

CONTRACT LENGTH: ROYAL BANK OF SCOTLAND

SERVICES: MECHANICAL AND ELECTRICAL REFURBISHMENT

SECTOR: RETAIL BANKING
